

Effective Ontology Networks *for interoperability*

Bram Bazuin
Head of Expertise Fields
Semmtch
brambazuin@semmtech.com

ORGANIZED BY:

VISION

To allow the coordination of a multicriteria efficient decision-taking across all AECOO stakeholders by digitally duplicating EU building stock.

OPEN TECH FRAMEWORK

Generate an Open Technology Framework which allows improved interoperability with and across Building Digital Twins.

REUSE

Developments will consider existing and domain-independent Open Standards whenever possible.

✓ **Ontologies** proven to be a **corner piece** for Digital Twins.

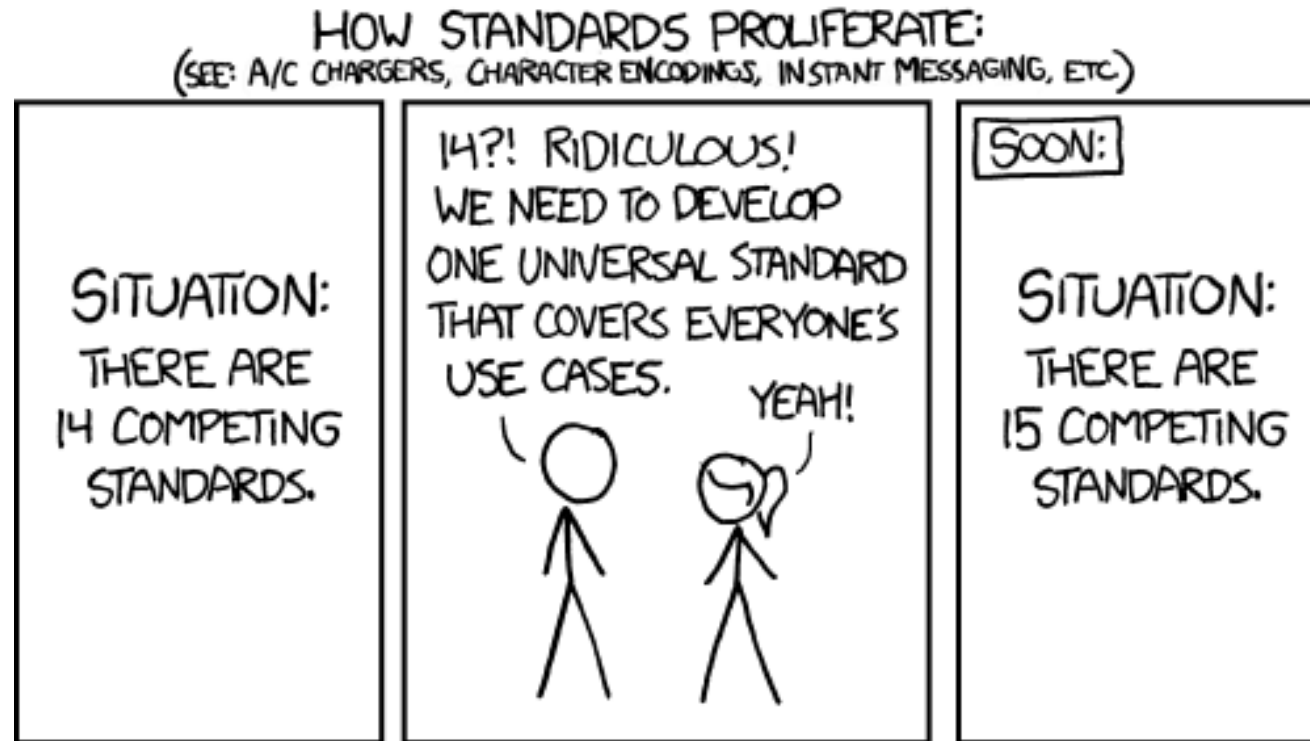

By far most ontologies apply **W3C Linked Data** recommendations.

 Ontology reuse still sub-optimal, limiting effectivity.

Existing Ontology Networks

Notes on Presentations

ORGANIZED BY:

- **COGITO** – Graphical notation aids early discussions, however, does not ensure it happens.
- **BIM2TWIN** – Use-case based approach, modelling choices of others a challenge for alignment.
- **HYSTORE** – Limited number of existing ontologies is a challenge as well as an aid.
- **Judith Fauth** – Non-technical domain experts have a key stake in ontologies.

- **ACCORD & CHEK** – (1) An ad-hoc process kicks issues down the road, (2) RDF is a key component, not a one-size-fits-all.
- **DigiChecks** – Modularize abstraction levels and those responsible for developing. Define selection criteria for
- **CIMNE** – Use RDF for information exchange, not for storage (e.g. timeseries).

Activities & Road Map

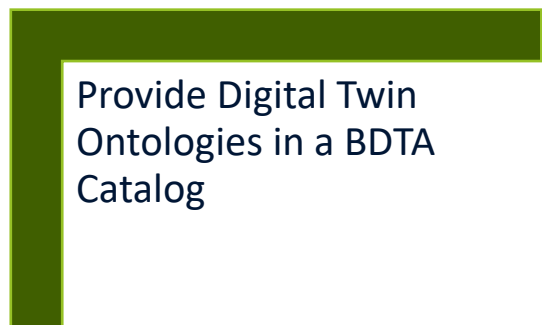

ORGANIZED BY:

- ✓ Definition of “Ontologies and Building Digital Twins”
- ✓ Development of some ontologies
- Definition of Core Components (CEN TC442, EN17632)
- ❑ Alignment and definition of Interoperable Ontologies principles
- ❑ Improved interoperability of existing Domain Ontologies
- ❑ Catalog of Building Digital Twin Ontologies

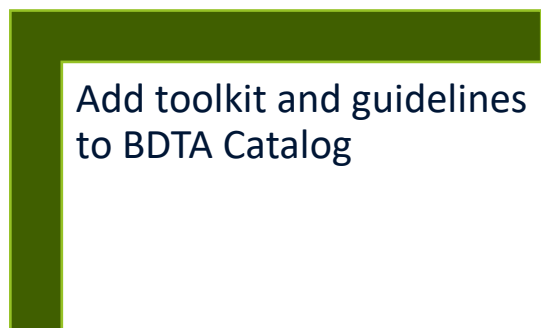

BDTA as initiator

2024

Provide Digital Twin
Ontologies in a BDTA
Catalog

2025

Add toolkit and guidelines
to BDTA Catalog

2026+

Align Values and
Principles for Ontology
Networks

BDTA as
facilitator

4GH BUILDING DIGITAL TWIN
International Congress
